www.cheshireecology.com
01270 611125

EXECUTIVE SUMMARY

Cheshire Ecology Ltd. was commissioned by Trewhythen Hall Ltd. on 31st June 2021, to carry out a bat survey of Trewhythen Hall, Lon Y Ficerdy (Vicarage Lane), Gresford, Wrexham LL12 8US. It will henceforth be referred to as ‘the site’.

Trewhythen Hall was built in 1829, at the end of the Georgian period. It is Regency in style, although this period of architecture strictly speaking extends from 1810-1820.

The house is surrounded by 10 acres of parkland and has several large trees. These include monkey puzzle trees *Araucaria araucana*, pedunculate oak *Quercus robur* and a giant sequoia *Sequoiadendron giganteum*.

The original Preliminary Bat Roosting survey was carried out by Enfys Ecology Ltd. in January 2023. They found a single bat dropping in the attic of the main house (Section 1 in their report).

Cheshire Ecology Ltd. has carried out two dusk and one dawn bat activity surveys. These took place on 16th May 2023, 30th May 2023, and 13th June 2023. Nightfox infra-red bat detectors were used during all three surveys (one on 13th May, five on 30th May and two on 13th June).

Soprano pipistrelles were recorded emerging and re-entering the lower part of the pediment on the southern side of the main house on 30th May 2023. The main house is therefore a bat roost.

As a consequence, it will be necessary for the client to obtain a European Protected Species Development Licence from Natural Resources Wales. It should be possible to carry out work on the modern extension and the former stables without a licence. If a bat is encountered work must cease immediately.

PHOTOGRAPHS

Photograph 1: Showing the pointed pediment and tympanum.....	9
Photograph 2: Trewhythen Hall was built in 1829. It has three triangular pediments..	22
Photograph 3: The front of the house has a striking classical appearance, with dentil ornamentation	22
Photograph 4: The building was surveyed on three occasions. Bats were seen to enter and leave the tympanum on the south-western aspect of the house.	23
Photograph 5: This photograph shows the pediment on the southern corner of the house. No bat activity was seen on the aspect.....	23
Photograph 6: The modern extension conceals the original door. It has no bat potential.	24
Photograph 7: Much of the entablature is rotting.	24
Photograph 8: The northern aspect of the house has less ornamentation. There are no pediments, and all of the windows are uPVC.....	25
Photograph 9: The brickwork is punctured by holes and some of the bricks have been shattered by frost. However, no bats were seen to enter or leave this part of the building.....	25
Photograph 10: The modern extension (Building 2) is in good decorative condition and has uPVC windows.....	26
Photograph 11: Very little bat activity was seen in this area.....	26
Photograph 12: The coach is generally in good decorative order and has low bat potential. Most of the windows are made from painted timber.....	27
Photograph 13: The southern end of the coach house was watched on two occasions. There was no indication that bats were entering or leaving the building.	27
Photograph 13: This photograph shows the main lawn. The remains of the orangery or greenhouse can be seen in the distance.	28
Photograph 14: Common pipistrelles were seen flying around the Lawson cypress tree on several occasions.	28
Photograph 15: We have seen bats emerge and enter the cavity circled in red. Bats may also be entering the cavity circled in purple.	29
Photograph 16: We anticipate that the areas highlighted in magenta will need to be replaced with new timber.	29

1 INTRODUCTION

- 1.1.1 Cheshire Ecology Ltd. was commissioned by Trewhythen Hall Ltd. on 31st June 2021, to carry out a bat survey of Trewhythen Hall, Lon Y Ficerdy (Vicarage Lane), Gresford, Wrexham LL12 8US. It will henceforth be referred to as ‘the site’.
- 1.1.2 The centre of the site is located at OS Grid Reference SJ35305451 at an altitude of approximately 75m AOD.

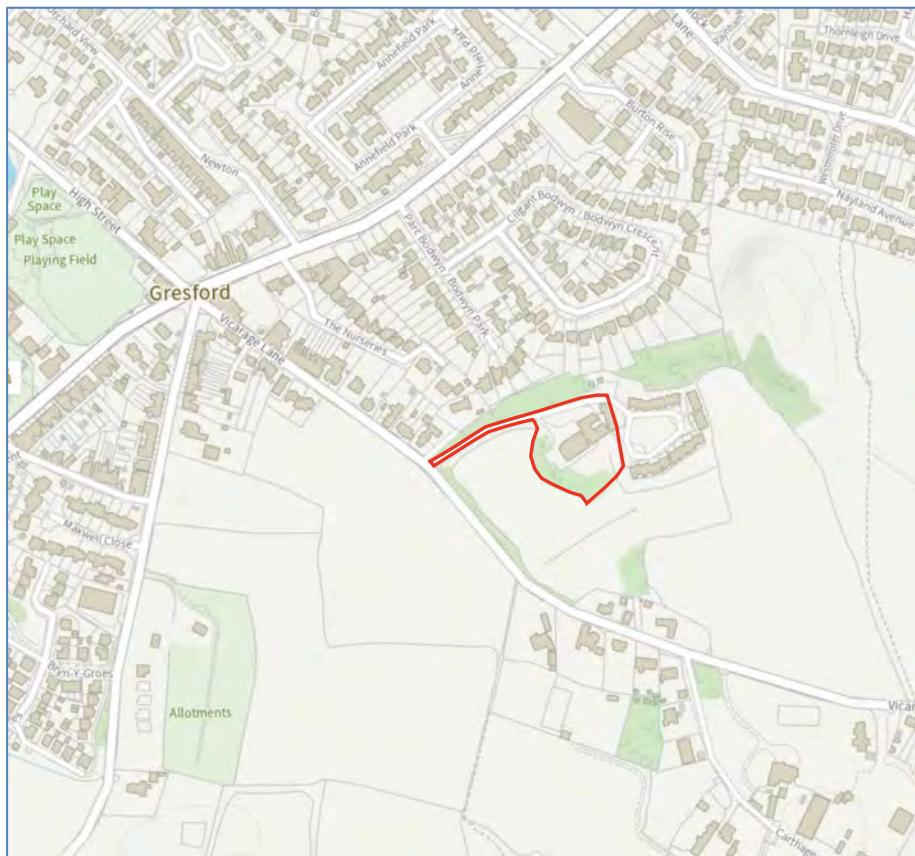

Fig 1: Site location

1.2 Context

- 1.2.1 Trewhythen Hall was built in 1829, at the end of the Georgian period. It is Regency in style, although this period of architecture strictly extends from 1810-1820.
- 1.2.2 The house is surrounded by 10 acres of parkland and has several large trees. These include monkey puzzle trees *Araucaria araucana*, pedunculate oak *Quercus robur* and a giant sequoia *Sequoiadendron giganteum*.

2 METHODS

2.1 Data trawl

- 2.1.1 The desktop survey involved data searches for statutory and non-statutory sites, legally protected species, and other features of interest within a 1km radius of the site. The centre of the development site was used for the data search.
- 2.1.2 The following sources were searched for information about the site:
 - Defra's 'MAGIC' website.
 - Google Earth.
 - The NBN Gateway; and the
 - 'Where's the Path' website.
- 2.1.3 The baseline information referred to in this report was obtained from COFNOD, the biological record centre for North Wales.

2.2 Planning context

- 2.2.1 The following habitats are the subject of Habitat Action Plans (HAPs) in the Wrexham County Borough Council Local Biodiversity Action Plan (LBAP).
 - Derelict and Industrial Land
 - Gardens
 - Lowland bogs
 - Ponds
 - River, stream, and canals
 - Upland moorland
 - Veteran trees and wood-pasture
 - Woodland
- 2.2.2 The following species are the subject of Species Action Plans (SAPs) in the Wrexham County Borough Council LBAP.
 - Badger
 - Barn owl
 - Black poplar
 - Great crested newt
 - Lesser horseshoe bat
 - Otter
 - Song thrush

2.3 Survey

- 2.3.1 Cheshire Ecology Ltd. has carried out two dusk and one dawn bat activity surveys. These took place on 16th May 2023, 30th May 2023, and 13th June 2023.
- 2.3.2 Six surveyors were used for the first and second activity surveys. These surveys showed that there was very little bat activity around the coach house and the modern extension. Four surveyors were available for the dawn survey, and they were arranged around the main house, which was where all of the previous activity had been observed.
- 2.3.3 The surveyors used an Elekon Batlogger, an Anabat Walkabout, an Anabat Swift and four Wildlife Acoustics EM Touch bat detectors. The data has been stored on a Synology 920+ NAS Drive and was analysed using Wildlife Acoustics Kaleidoscope Professional software. All of the data has been checked by Dr Page using the latter software. The data will be preserved for seven years from the date of this report.
- 2.3.4 Five Nightfox ‘Whisker’ infra-red devices were used to record bat activity on 30th May and two on 13th June. One was used on 16th May 2023.
- 2.3.5 Plant names follow the Fourth Edition of the *New Flora of the British Isles* (Stace, 2019). The common name of the plant is stated first and is followed by the Latin name, on the first occasion that it is used. Only the common name is used subsequently.
- 2.3.6 Martin Page BSc PhD MCIIEM, Lee Bagnall CEnv CEcol MCIEEM and Eleanor Weir BSc MCIEEM are members of the Chartered Institute of Ecology and Environmental Management (CIEEM) and adhere to that organisation’s Code of Professional Conduct. Dr Page has carried out bat activity surveys since 2010 and has led them since 2013. Lee Bagnall and Eleanor Weir both have fifteen years of experience and hold Level 2 bat licences. Louise Sawrey. BSc holds a Level 1 bat Licence. All four are experienced ecologists.
- 2.3.7 The other surveyors were Elise Whiteman BSc, Julia Lloyd BSc, and Sam Cheshire.

2.4 Weather

- 2.4.1 The weather was fine and dry during all of the surveys. The dawn survey was carried out after a very hot day, but there was still bat activity in the surrounding area.

	16/05/2023	30/5/2023	13/06/2022
Start temperature	10	16	17
End temperature	9	11	18
Wind speed	0	0	1
Rain	No	No	No
Start time	20:35hrs	20:55hrs	03:16hrs

End time	22:45hrs	23:00hrs	05:01hrs
Sunrise	05:13hrs	04:54hrs	04:46hrs
Sunset	21:05hrs	21:25hrs	21:38hrs
Weather	Clear	Clear	Clear

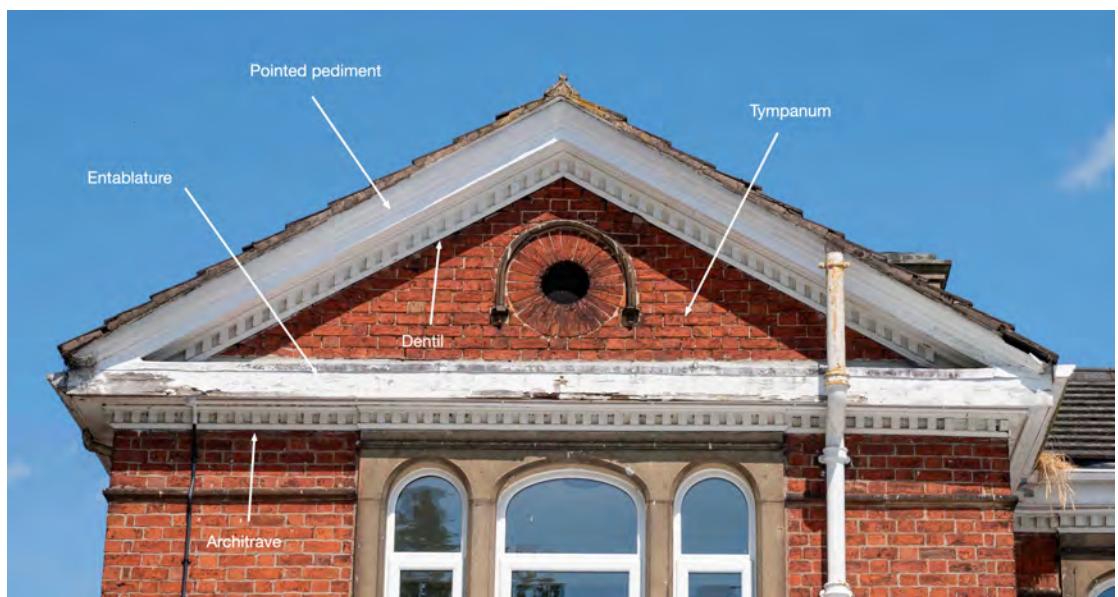

2.5 Limitations

- 2.5.1 There were no seasonal limitations.
- 2.5.2 Four of the surveyors used Wildlife Acoustics EM Touch bat detectors. Our company has found these to be reliable and cost-effective, but the software can be over optimistic in its identification. For the reasons the data was checked using Wildlife Acoustics' Professional Kaleidoscope software.

2.6 RESULTS

2.7 Buildings

- 2.7.1 Trewhythen Hall is built of red brick and has three pointed pediments¹. The front of the house is very impressive, but the western aspect is plainer, with no embellishment. The tympanum of each pediment is built from brick and is pierced by a circular aperture. The cornice has dentil ornamentation.
- 2.7.2 The raking cornices are in good condition on the eastern side of the house, but they are deteriorating on the southern aspect (see Photograph 1). The original entrance to the house is hidden by a modern extension. The original doorway is framed by two columns. These are invisible from the outside of the building.

Photograph 1: Showing the pointed pediment and tympanum.

- 2.7.3 Aerial photographs show that the house is constructed from four conjoined buildings, arranged around a central glazed atrium. There are three gable ends, each with a classical pediment. We assume that the house originally had uninterrupted views across the surrounding countryside.
- 2.7.4 There are two further buildings to the rear. Immediately to the rear of the original house is a modern accommodation block. This is in good decorative condition and has modern uPVC windows. It is u-shaped and connected by a passageway to the main house.
- 2.7.5 The original coach house was presumably built at the same time as the house. It was originally used for staff accommodation and storage.
- 2.7.6 Immediately behind the hall are nineteen self-contained cottages. These are not included in the proposed development.

¹ The pointed decoration at the gable end of the building.

2.8 Legislation

- 2.8.1 All bat species are protected in the UK under Schedule 5 of the Wildlife and Countryside Act 1981 (as amended). The species is also protected under Annex II of the Council Directive 92/43/EEC 1992 on the Conservation of Natural Habitats and of Wild Fauna and Flora (the EC Habitats Directive). This has been transposed has been transposed into UK law by means of the Conservation of Habitats and Species Regulations 2010 (as amended) (England and Wales), the Conservation (Natural Habitats, & c.) Regulations 1994 (as amended) and the Conservation (Natural Habitats, etc.) Regulations (Northern Ireland) 1995 (as amended).
- 2.8.2 It is an offence to deliberately capture, injure or kill a bat; deliberately disturb in a way that would affect their local distribution or abundance, or affect their ability to survive, or breed. It is also an offence to damage or destroy a bat roost and to possess, control, transport, sell, exchange or offer for sale/exchange any live or dead bat or any part of a bat.

2.9 Enfys Ecology PRA (2023)

- 2.9.1 Enfys Ecology (Enfys Ecology, 2023) carried out a Preliminary Roost Assessment (PRA) of the buildings in January 2023. They inspected the interior and exterior of all of the buildings. The survey was carried out by Ashley Payne (accredited agent on NRW Bat Licence No. S091201/2 and Jane Kingsley. The PRA was carried out correctly.
- 2.9.2 The loft space in the main house contained an area that was inaccessible. The same applied to the old coach house. Enfys Ecology consequently recommended bat activity surveys.
- 2.9.3 Their report states that the roofs of all buildings were in good condition, but there was potential for bats to roost in the areas where mortar was missing at the gable ends. There was also a crack in the brickwork of the eastern elevation of the main house, where the extension joined the main building. All three buildings had broken fascia boards or gaps where the timber met.
- 2.9.4 Daylight could be seen under the rafters in the main house and the extension. The coach house had large bags of insulation, which meant that there were no visible gaps.

2.10 Etive Ecology Ltd. (2013)

- 2.10.1 Etive Ecology Ltd. (Etive Ecology Ltd., 2013) carried out an ecological appraisal of the site for a planning application for 21 two-bedroom bungalows. The survey found several trees that had bat potential. Their survey found a pond approximately 500m to the north of Cara Farm. The pond was on private property and could not be surveyed. A second pond was 250m to the south-east but was seasonal and considered unsuitable for great crested newts.
- 2.10.2 Etive Ecology's report refers to five trees or groups of trees with high bat potential. Their report concentrated on the area to the north of the care home. None of these trees will be impacted by the current proposal.

2.11 Results of the data search

- 2.11.1 The data search at Cofnod (2023) produced fourteen records for bats². The closest record is for a common pipistrelle in Vicarage Lane. Two pipistrelle bats were seen in 2003 and the surveyor believed that there had been a roost in the past. This was in a box section above the porch, approximately 57m away from Trewhythen Hall. At least one brown long-eared bat and a common pipistrelle were recorded between 1984 and 1993 at a location 174m from the Trewhythen Hall. A common pipistrelle was seen in woodland 247m to the east, in 1989.
- 2.11.2 A lesser horseshoe bat was recorded on two occasions at 'Bryn y Groes' in 2017. This derelict house was originally 484m to the south-west of Trewhythen Hall. The surveyors also recorded common pipistrelle, soprano pipistrelle, and a brown long-eared bat at this location (Protected Species Ecology Ltd., 2018). The house was eventually demolished and replaced by a modern housing development. A purpose-built bat house was built to provide mitigation for the development. Lesser horseshoe bats are a Priority Species in Wrexham's Local Biodiversity Action Plan.
- 2.11.3 All of the other bat records in the immediate area are common or soprano pipistrelles.

² All of these records are marked as confidential, so we can only give the approximate location.

3 RESULTS OF THE ACTIVITY SURVEYS

3.1 Assessment of the buildings

- 3.1.1 We have checked Enfys Ecology's Preliminary Roost Appraisal (PRA) and can confirm that it was been carried out correctly.

3.2 First dusk survey 16th May 2023

- 3.2.1 The weather was fine and sunny when we carried out the first dusk survey. EW recorded two calls from common noctules at 21:44hrs and 21:48hrs. There were five calls from common pipistrelles and eleven from soprano pipistrelles. Two further calls were identified by the EM Touch software as brown long-eared bats, but further analysis by the professional version of the software suggests that they were noctules. The surveyor observed a soprano pipistrelle fly from the direction of the main building but couldn't identify the exact point that it had emerged from.
- 3.2.2 LS only recorded six bats during the evening. A distant noctule was recorded at 21:27hrs, but the remainder were pipistrelles. There was very little activity in the north-west corner of the site. LB was located 20m further to the south and recorded twenty bats. Six of these were common noctules, four were common pipistrelles and the remainder were soprano pipistrelles. Most of these bats were foraging along the treeline to the west and no bats emerged from the buildings.
- 3.2.3 MP recorded a larger number of bats, but most of these were soprano pipistrelles. Common noctules were recorded on several occasions and two calls (originally recorded as serotines by the software) were also from this species. The peak frequency for both of these bats was in the region of 18 to 35khz. The great majority of the calls were from the trees on the eastern side of the house.
- 3.2.4 EW recorded the greatest number of bats, using an Elekon Batlogger (362 records). The great majority of these were soprano pipistrelles, with a much smaller number of common pipistrelles. Most of these bats were foraging along the line of trees to the east of the buildings.
- 3.2.5 There was also quite a lot of activity around the Lawson's cypress tree *Cupressus lawsoniana*. JL recorded a noctule at 21:44hr and eight soprano pipistrelles for the rest of the evening.
- 3.2.6 No bats were seen to enter or leave the building during this survey. This may have been because we only had access to one infra-red device during this evening.

3.3 Second dusk survey 30th May 2023

- 3.3.1 Five Nightfox Whisker devices were available for the second dusk survey. Only one recorded any bats. This was the device covering the pediment

above the modern extension. Unfortunately, the area in the middle of the pediment (the tympanum) was in shadow, which meant that some of the bat activity was unclear. However, there was sufficient detail to confirm that bats were entering and leaving the building. All of the bats appeared to be one species, *Pipistrellus pygmaeus*.

- 3.3.2 EW recorded ten bats on 30th May. Soprano pipistrelles were recorded on seven occasions and common pipistrelles on three. Most of the activity was around the treeline to the east of the main house or the garden. A possible brown long-eared bat was recorded on a single occasion at 22:01hrs.
- 3.3.3 LB recorded eleven bats during the second dusk survey. A distant noctule was recorded at 21:56hrs. Five of the recordings were of soprano pipistrelles and five were common pipistrelles. Most of the bats were recorded via the bat detector and not seen. Nothing was recorded on the Nightfox Whisker.
- 3.3.4 LS was located in the north-west of the site, watching the modern extension and the coach house. There was a lot of bird activity in this area, but there were very few bats. Louise recorded one noctule at 21:56hrs, four common pipistrelles and one soprano pipistrelle. Only one of the bats was seen and the others were brief calls as the bats passed her.
- 3.3.5 SC recorded a common noctule at 22:01hrs. All of the other bats were either common pipistrelles (4) or soprano pipistrelles (6).
- 3.3.6 MP was located in front of the pediment above the main entrance. His Nightfox Whisker recorded several bats entering and leaving the pointed pediment³. The majority of the bats appeared to be entering and leaving the left-hand side of the raking cornice where it met the entablature⁴. However, a photograph of the pediment show that there is another hole at the right-hand side of the raking cornice⁵. Comparison with the audio recording on the Anabat Walkabout indicated that the bats were soprano pipistrelles. There was a lot of other activity where it wasn't possible to be certain that a bat had entered the building.

3.4 Dawn survey 13th June 2023

- 3.4.1 Only four surveyors were available for the dawn survey. They were all arranged around the main house, where we had seen activity during the previous dusk survey. There was very little bat activity during the dawn survey. No bats were seen to enter or leave the building during this survey.
- 3.4.2 There was a limited amount of bat activity during the dawn survey. The previous day had been very hot, and this may have deterred the bats from emerging. EW recorded a common noctule at 3:42hrs, 3:50hrs and 4:32hrs. The other bats that she recorded were common and soprano pipistrelles.

³ The classical decoration at the gable end of the roof.

⁴ The level decoration at the bottom of the pediment.

⁵ The sloping part of the pediment.

- 3.4.3 LS recorded a brown long-eared bat *Plecotus auritus* on two occasions, at 3:24hrs and 3:32hrs. The call was very quiet, and the bat wasn't seen. She recorded a common pipistrelle on seven occasions. Most of the activity was around the tree line to the west of the main house.
- 3.4.4 MP recorded a common noctule at 3:41hrs, 3:49hrs and 3:42hrs. The bats wasn't seen. Most of the other bats were identified as common pipistrelles, which were recorded on thirteen occasions. All of the activity seemed to be among the trees to the south of the hall. Soprano pipistrelles were recorded on four occasions. A brown long-eared bat was recorded at 3:59hrs but was not seen.
- 3.4.5 Two Nightfox Whiskers were available for the dawn survey, but neither of them recorded any bat activity. The first Whisker was set up to record the pediment on the southern side of the building, while the second recorded the pediment on the eastern side.

Table 2: Bat activity recorded on Nightfox 'Whisker'. 30th May 2023.

4 CONCLUSIONS

- 4.1.1 Enfys Ecology (Enfys Ecology Ltd., 2023) have already confirmed that the original 19th century house is a roost (Section 1 in their report). Unfortunately, we haven't been able to locate the exact position where they found a bat dropping, because this isn't shown in their report.
- 4.1.2 Nightfox 'Whisker' devices have proved their value during this survey. This was the first time that we have used them, and they enabled us to capture activity which could have been missed if we had relied entirely on human observers. The recordings are date stamped, which meant that we could compare the video recording with the calls recorded by the closest observer.
- 4.1.3 There was a lot of soprano pipistrelle activity on one five-minute recording (OV10). On two occasions bats was seen to enter the building in quick succession and then re-emerge two seconds later. This suggests that the roost is within the pointed pediment.
- 4.1.4 The building was surveyed by four experienced ecologists, so we have very high confidence in the results. Three of the surveyors have Level 2 bat licences and one has a Level 1 licence. Two of the surveyors are recent graduates, but they were closely supervised by the author and have received training. EW is a graduate and has one season's experience of bat activity surveys.

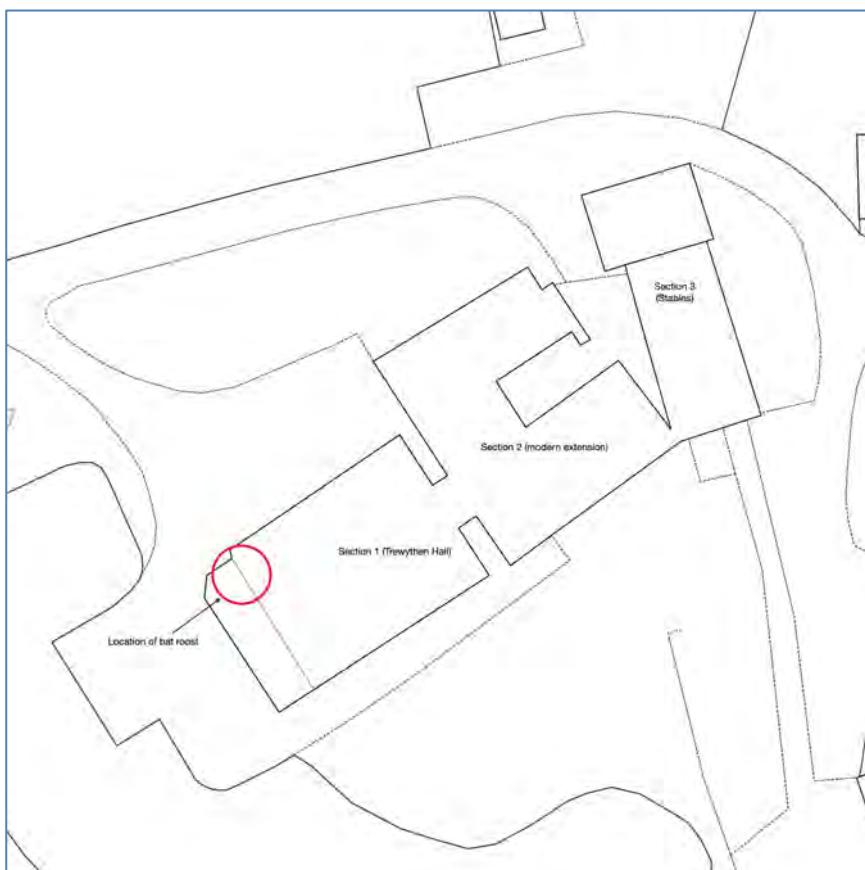

Figure 2: Location of the bat roost.

- 4.1.5 All of the bat activity appears to have been in one location, the pointed pediment above the modern extension. There was no evidence that bats were using any other parts of the building complex.
- 4.1.6 The pediment has been built from wood and is protected by a pitched slate roof. The pediment is effectively constructed from three wooden boxes, comprising the two raking cornices and the level entablature. Both of the raking cornices are rotten where they join the entablature, and this is presumably where bats are entering the building.
- 4.1.7 The pediment has been inspected externally and the most likely entry point is a rectangular hole above the gutter on the south-west corner of the roof. This is circled in red in Photograph 15.
- 4.1.8 We initially thought that the bats were entering the building through the circular vent in the centre of the tympanum. However, this is sealed by a steel grill and may explain why Enfys Ecology only found one bat dropping in the roof space.

4.2 Obtaining a licence

- 4.2.1 Our survey has shown that the bats are roosting in the pediment or gable at the southern aspect of the main house (Mitchell Jones, 2004). Bats are often found in the gables because they often provide easy access to the roof space.
- 4.2.2 In order to repair the pediment, it will be necessary to remove the wooden trim immediately below the roof tiles and the wooden box that forms the entablature. Assuming that this is a summer roost, the optimum time for carrying out the repair work would be between 1st September and 1st May, annually.
- 4.2.3 Neither we, nor Enfys Ecology, have found any evidence that bats are using the modern extension (Section 2 in their report) or the stables (Section 3).
- 4.2.4 It may be possible to carry out the work with Reasonable Avoidance Measures if the existing holes can be replaced exactly as they are. However, this is unlikely to be acceptable to the owner because there will still be obvious holes in the pediment.
- 4.2.5 If RAMs were used, it would still be necessary to apply for an EPS if a bat was found. This could cause significant delays.

4.3 Proposed mitigation

- 4.3.1 In order to obtain a development licence, it is necessary to address three key criteria:
 - Purpose.
 - Alternatives.
 - Effect on favourable conservation status.

- 4.3.2 The **purpose** is to maintain the house in good condition. This will also ensure the welfare of the bats and maintain their conservation status.
- 4.3.3 We have discounted the replacement of the entire pediment with a fibreglass facsimile because this would probably cause the bats to abandon the roost.
- 4.3.4 The damaged wood in the raking cornices will be overclad with uPVC. The cladding will incorporate features that will allow bats to enter and leave the building, as they do currently. The horizontal box at the bottom of the pediment has completely rotted and will need to be replaced. It will be inspected by a suitably licensed ecologist with an endoscope before it is removed.
- 4.3.5 The work is likely to require a European Protected Species (EPS) Development licence and will need to be supervised by a suitably licensed bat ecologist. The following measures are likely to be required as part of the licence method statement:

- All of the contractors will need an illustrated toolbox talk. This must be given by an experienced, qualified ecologist. The toolbox talk will describe the species of bats that are likely to be encountered.
- The toolbox talk will describe the legal protection that bats receive in Wales and what to do if they find one. Bats can only be handled by someone with a Natural Resources Wales bat licence.
- If a bat is found injured during the work they should take it to the RSPCA in London Road, Stapeley, Nantwich CW5 7JW. Telephone +44 300 123 0748. You do not need a protected species licence to rescue an injured bat.
- The replacement timber will be prepared before it is lifted onto the modern extension. No work will take place near the roost site without a licensed bat ecologist being present.
- Bats travel widely and can carry rabies. They should only be handled by a licensed ecologist who is wearing gloves and has received a course of rabies injections. If you are bitten by a bat you should go to the accident and emergency department at Wrexham Maelor Hospital in Croes-newydd Road, Wrexham LL13 7TD.
- The existing holes should not be blocked as this would prevent bats from entering or leaving the roost. While we have identified a couple of holes where bats were seen emerging, they could be found elsewhere in the soffit boxes, roof space or pediment.

5 RECOMMENDATIONS

5.1.1 This report should be sufficient to obtain planning permission. However, it will be necessary obtain an EPS Licence from Natural Resources Wales before the necessary work can be undertaken in the main house (Section 1 in Enfys Ecology's Preliminary Roost Assessment).

<https://www.smartsurvey.co.uk/s/SCAPGE/?lang=498162>

5.1.2 We have been unable to find any evidence that bats are roosting in the modern extension (Section 2) or the coach house (Section 3). It should be possible to work on these buildings once you have obtained planning permission. However, if a bat is found it will be necessary to apply for an EPS licence.

5.1.3 We have been unable to determine what type of bat roost this is. The frequent visits by bats recorded on AV10 suggests that it might be a maternity roost. To clarify this, we recommend that there is a further survey of the pediment. This will only require person and can be done using a 'Whisker' infra-red device. We had hoped that the dawn survey would answer this question, but there was no evidence that bats were entering or leaving the roost during that survey. We believe that this was due to the extremely high ambient temperature during the previous day (12th June 2023).

5.1.4 If you decide to apply for an EPS licence it will be necessary to resurvey the interior of the loft space. This must be done no more than three months before you apply for the licence. This is best done during the summer months.

5.1.5 We recommend that the pediment at the front of the building is carefully inspected before you apply for the licence. It is permissible to take external photographs of the pediment as long as neither flash nor external lights are used. Infra-red cameras can be used.

The following is an extract from NRW's website.

<https://naturalresourceswales.gov.uk/permits-and-permissions/species-licensing/list-of-protected-species/bat-licences-for-surveys-and-conservation-work/?lang=en>

A licence to photograph or film bats is not required if the photography causes no extra disturbance, for example

- non-flash photography in roosts while bats are present as part of a licensed survey and if using only natural light or low-level artificial light
- flash photography in roosts and hibernacula if bats are not present

- photography of bats caught in traps during licensed survey work
- flash photography of individual or groups of bats for identification purposes. Where the licensed surveyor considers that this will cause less disturbance than handling or prolonged illumination of bats
- photographing or filming of bats outside roosts where no additional lighting is used, or only infra-red illumination is used.

APPENDIX A: PHOTOGRAPHS

Photograph 2: Trewythen Hall was built in 1829. It has three triangular pediments.

Photograph 3: The front of the house has a striking classical appearance, with dentil ornamentation.

Photograph 4: The building was surveyed on three occasions. Bats were seen to enter and leave the tympanum on the south-western aspect of the house.

Photograph 5: This photograph shows the pediment on the southern corner of the house. No bat activity was seen on the aspect.

Photograph 6: The modern extension conceals the original door. It has no bat potential.

Photograph 7: Much of the entablature is rotting.

Photograph 8: The northern aspect of the house has less ornamentation. There are no pediments, and all of the windows are uPVC.

Photograph 9: The brickwork is punctured by holes and some of the bricks have been shattered by frost. However, no bats were seen to enter or leave this part of the building.

Photograph 10: The modern extension (Building 2) is in good decorative condition and has uPVC windows.

Photograph 11: Very little bat activity was seen in this area.

Photograph 12: The coach is generally in good decorative order and has low bat potential. Most of the windows are made from painted timber.

Photograph 13: The southern end of the coach house was watched on two occasions. There was no indication that bats were entering or leaving the building.

Photograph 13: This photograph shows the main lawn. The remains of the orangery or greenhouse can be seen in the distance.

Photograph 14: Common pipistrelles were seen flying around the Lawson cypress tree on several occasions.

Photograph 15: We have seen bats emerge and enter the cavity circled in red. Bats may also be entering the cavity circled in purple.

Photograph 16: We anticipate that the areas highlighted in magenta will need to be replaced with new timber.
